REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The compositions in Table 3 are commensurate in scope with the claims and establish criticality. Compositions A-D of Example 1 on pages 21 and 22 of the present application illustrate that including both a maleic anhydride/olefin co-polymer and an EO-PO co- polymer in a composition results in markedly improved precipitation characteristics compared to including only a maleic anhydride/olefin co-polymer or only an EO-PO co- polymer. In particular, Composition D demonstrates that a composition including both a maleic anhydride/olefin co-polymer and an EO-PO co-polymer as claimed resulted in a solution that did not form any precipitate in hard water at temperatures as low as 32 ° F. contrast, Composition B, which included only a maleic anhydride/olefin co-polymer precipitated in hard water at a temperature of about 62 ° F. Composition C, which included only an EO-PO co-polymer, precipitated in water at a temperature between 32 ° F and about 40 ° F. Because the only variance in the compositions was the presence (or lack thereof) of a maleic anyhydride/olefin co-polymer or an EO-PO co-polymer while all of the other components of the compositions remained the same, Example 1 effectively illustrates the criticality of including both a maleic anyhydride/olefin co-polymer and an EO-PO co- polymer. Neither Underwood nor Cummings disclose or suggest that markedly improved precipitation characteristics are achieved when both such components are used. Accordingly, a person of ordinary skill in the art would not have reasonably expected such results based on the teachings of these references and therefore the claims are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
